

Data Dictionary – Pharmaceutical Sales & Dispensing Records

August 2026 | Page 1 of 1

This data dictionary describes the transaction schema for synthetic pharmaceutical sales parquet datasets and dimensional lookups.

Field Name	Description
trx_id	Unique alphanumeric identifier assigned to each pharmaceutical sales transaction.
VendorID	Numeric identifier indicating the Primary Wholesale Distributor or Fulfillment Channel: • 1 = Manufacturer Direct • 2 = McKesson Corporation • 3 = AmerisourceBergen / Cencora • 6 = Cardinal Health • 7 = Specialty Pharmacy Direct
tpep_pickup_datetime	The exact date and timestamp when the prescription order was processed and dispensed.
ProductID	Foreign key linking to pharma_product_lookup.csv (IDs 1–18), mapping to specific Drug Names, Therapeutic Areas (e.g., Cardiology, Oncology), and Market Segments.
payment_type	Numeric code representing the reimbursement channel / primary payer: • 1 = Commercial Insurance • 2 = Medicare Part D • 3 = Medicaid • 4 = Out-of-Pocket / Cash • 5 = Government / VA Program
passenger_count	Dispensed prescription volume / total quantity of units (tablets, vials, injectors) sold per order line.
trip_distance	Cold chain / supply-chain distribution transit distance in kilometers from distribution center to dispensing facility.
total_amount	The final net realized revenue billed for the transaction, accounting for list prices and contractual commercial rebates/discounts.
TherapeuticArea (Lookup)	Clinical category classifying the medication (Cardiology, Endocrinology, Oncology, Respiratory, Neurology, Immunology, etc.).
DrugName (Lookup)	Proprietary brand name along with its active generic chemical molecule (e.g., LipidShield (Atorvastatin)).
MarketSegment (Lookup)	Regulatory market classification (Prescription - Chronic, Prescription - Acute, Biologics - Specialty, OTC).
